

PHP 7.2 Release Notes

Effective July, 2018, [UK2.net](#) will be updating all our servers by installing PHP 7.2. This could potentially affect the functionality of your site. This article will inform you of the changes that will take place as a result of the upgrade.

What is Changing?

PHP Changes:

1. PHP 7.2 has been installed on all servers.
2. PHP 7.2 will be set at the default for all sites on the servers.
3. PHP 7.0 (the current version) will remain on the server for a period of 1 month after the upgrade.
4. These links provides documentation on bringing your PHP code up to date. [PHP 7.0 to PHP 7.1](#) and [PHP 7.1 to PHP 7.2](#)

MYSQL Changes:

1. MariaDB 10.1 will be upgraded to MariaDB 10.2
2. Known changes and incompatibilities are listed [here](#).
3. MariaDB enables "strict mode" by default as of version 10.2. Strict mode controls how MariaDB and MySQL handle invalid or missing values in data-change statements such as INSERT or UPDATE. Applications not built with strict mode enabled may cause undesired behavior; please verify applications are built with strict mode. More information about strict mode is available [here](#).

What Modules Will Be Affected By The Upgrade?

The following Module has been installed through a PECL extension in PHP 7.2:

- mcrypt

The Following Are PHP 7.2 Modules:
