

How To Set Up CalDAV Synchronization for iOS

CalDAV Setup for iOS

If your domain doesn't have an SSL certificate, you will get a warning during setup. If you still want to add the CalDAV account, accept the warning and continue. Do the following on your iOS device:

1. Tap **Settings**.
2. Select **Mail, Contacts, Calendars**.
3. Tap **Add Account**.
4. Select **Other**.
5. Under Calendars tap **Add CalDAV Account**.
 - For **Server** enter **mail.uk2.net**
 - For **User Name** enter your full email address.
 - For **Password** enter your email password.
 - Enter whatever you like in the **Description** field. It will be auto-populated with what was entered in the **Server** field.
6. Tap **Next**.

Events in your webmail calendars will now be visible in the calendar app on your device. Any changes made in webmail will show up on your device with a refresh.
