

How To Add An Image To Your Webmail Signature

This article was created to help [UK2.net](#) clients add an image to webmail signatures.

To get started, log into your Webmail account at [chimail.uk2.net](#). Once logged in, open Settings > Mail > Signature. You will need to add HTML code for the image using the following syntax:

```

```

Replace "URL OF IMAGE" with the path to an image on the web, and "ALTERNATE TEXT" with text that will be shown when the image isn't or can't be loaded.

For example, if you have an image hosted on your website at <http://example.com/companylogo.jpg>, and your company is Example Co., you might use the following code:

```

```

Links can be added to your signature as well, using the following syntax:

```
<a href="http://example.com/page">Link Text</a>
```
